Patient-controlled analgesia using remifentanil in the parturient with thrombocytopaenia.

Jones R[1], Pegrum A, Stacey RG.

Author information

1 Kingston Hospital, Kingston Upon Thames, Surrey, UK.

Kick Off for Clinical Use

- **2008** OAA Belfast
- David Hill, Ulster Hospital
- **1500** Parturients with Remifentanil PCA
- Safe regimen
- No severe complications

Br J Anaesth. 2001 Sep;87(3):415-20.

Patient-controlled analgesia for labour using remifentanil: a feasibility study.

Blair JM[1], Hill DA, Fee JP.

Pilot Project

- First Parturient (with Remi) 11/2008
  - Pharmacologist
  - 2nd Child
  - Previous EDA
  - Bolus **20mcg**
  - 40 Parturients
  - Very successful

«keep it simple & safe»

SIMPLE

Standardised regimen

- low dose bolus (range)
- No adjustment to weight
- No remifentanil background infusion

SAFE

Editorial

Remifentanil for labour analgesia: time to draw breath?

incidents. A system has been established in Switzerland to monitor events relating to remifentanil in labour [33], and it now has data on over 1600 parturients. By expanding such databases to a large multi-national or national level, valuable denominator data could be gathered, and with the National Audit Projects in the UK our speciality has demonstrated the feasibility and benefits of large-scale collaboration [34].

Stocki et al 3/2014 *Anesth Analg*

Randomised, controlled, not blinded study, 40 parturients 20 Remi/ 20 EDA
Primary outcome: efficacy for pain reduction and satisfaction
Secondary outcome: safety «maternal apnea»

Bolus upto 60mcg
Lockout down to 1min
Supplemental O_2

- Less effective than EDA but good sati
- Neonate: APGAR, pH, RR no difference
- Mother: apnea despite good oxygen saturation

Summery

- **Thorough monitoring of maternal apnea**
- **«Simple interventions were sufficient to stop maternal apnea»**

Anesth Analg. 2014 Mar;118(3):589-97. doi: 10.1213/ANE.0b013e3182a7cd1b.

A randomized controlled trial of the efficacy and respiratory effects of patient-controlled intravenous remifentanil analgesia and patient-controlled epidural analgesia in laboring women.

Stocki D[1], Matot I, Einav S, Eventov-Friedman S, Ginosar Y, Weiniger CF.

One loves it or one hates it…

Shen 2013[49*]	0.1–0.4 μg/kg	2	0.05–0.2	NR	53	11% (epidural)
Stocki 2013[47]	20–60 μg	2	0	NR	19	NR
Tveit 2013[23]	0.15–1.0 μg/kg	2	0	0	41	5% (epidural)
Lin 2014[46]	0.4 μg/kg	5	0.04–0.05	NR	170	NR
Freeman 2015[48]	30–40 μg	3	0	NR	402	13% (epidural)

*Comparison of bolus only with continuous infusion. NR: not reported.

M vd Velde, B Carvalho 2/2016 *IJOA*

Narrative literature review, 25 controlled studies, level of evidence

Remifentanil

- More effective than nitrous oxide and other opioids
- **Less neonatal side effects than other opioids**
- Less potent than EDA
- **!** Maternal respiratory side effects

Opinion

«Most hospitals are not able to follow necessary standards»

«RemiPCA only when EDA not possible»

Int J Obstet Anesth. 2016 Feb;25:66-74. doi: 10.1016/j.ijoa.2015.12.004. Epub 2015 Dec 21.

Remifentanil for labor analgesia: an evidence-based narrative review.

Van de Velde M[1], Carvalho B[2].

Aaronson et al. 1/2017 *Anesth Analg*

Survey, 126 US Academic Medical Centers: 84 responded (67%)

- **9 maternal and neonatal severe events remembered**
- **! No events in centres which used remifentanil PCA more than 10x per year**
- **! Standardisation and protocols where missing**

Conclusion

Standards are missing

Anesth Analg. 2017 Apr;124(4):1208-1210. doi: 10.1213/ANE.0000000000001622.

Wissen

Starkes Opioid gegen Geburtsschmerz

Gebären Um den Schmerz beim Entbinden erträglicher zu machen, kommen heute oft Opioide zum Einsatz. Eine neue Studie stellt die aktuelle Praxis infrage. Künftig könnte das hochpotente Mittel Remifentanil häufig zum Einsatz kommen.

Felix Straumann

Bei Wehenschmerzen können Opioide helfen – oft geht es auch ohne. Foto: Getty Images

Fast die Hälfte der Frauen in der Studie erhielt zur Sicherheit Sauerstoff.

Table 7 Severe maternal and neonatal adverse events

		2010	2011	2012	2013	2014	2015	Total
Total number of cases		(438)[†]	(662)[†]	855	1033	1386	1366	4640
Ventilation mother		–	–	0	0	0	0	0
CPR mother		–	–	0	0	0	0	0
CPR neonate	Alerts unrelated to PCA[‡]	–	–	7	7	22	13	49 (1.1 %)
(n=4559)	Alerts potentially related	–	–	3[¶]	8[¶]	1	1	13 (0.3 %)
	Total RemiPCA alerts	–	–	10	15	23	14	62 (1.4 %)

Data present absolute numbers when not otherwise indicated. PCA: patient-controlled analgesia. CPR: cardiopulmonary resuscitation.
[†]In 2010 and 2011 severe events were not specifically addressed in the questionnaire, but hospitals exchanged experience through direct contact. These cases are not included in the overall number of cases.
[‡]Unrelated to remifentanil PCA if (a) conversion to epidural analgesia, (b) delivery via caesarean section, (c) remifentanil PCA was stopped >15 min prior to delivery, (d) severe neonatal pathology or pathological course of delivery was already known or present.
[¶]In 2012 and 2013, it was not possible to evaluate the event regarding the relation to remifentanil PCA. The RemiPCA Alert function, including detailed reporting for the evaluation of severe events, was established in 2014.

Melber et al 8/2019 *IJOA*

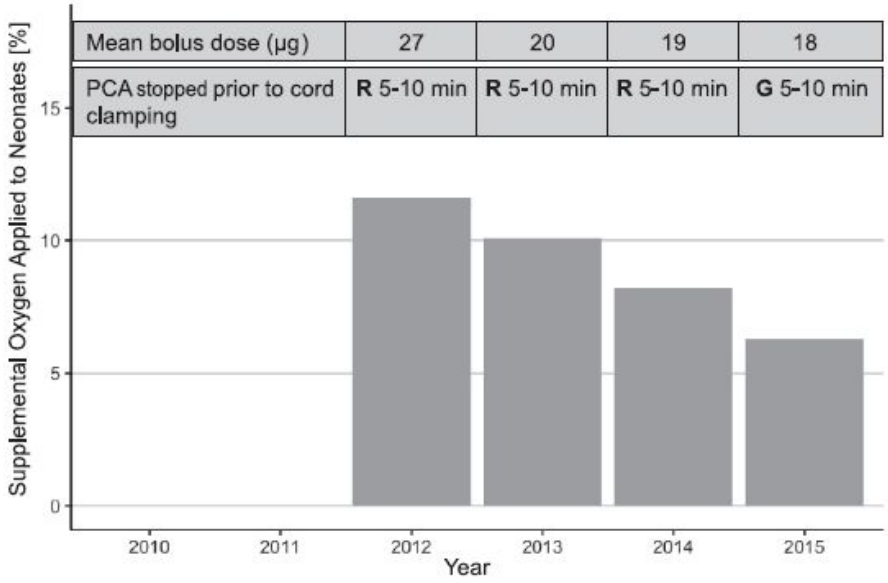

Fig. 4 Supplemental oxygen applied to neonates. Data reflect percentages when not indicated otherwise. R: Recommendation. G: Guideline (set as a mandatory standard in the network standard operating procedure)

Kantonsspital Aarau (Dr. Barbara Bauer, Dr. Monya Todesco-Bernasconi); Klinik Aarau, Hirslanden AG (Dr. Christian Zettler, Salome Kubli); Universitätsspital Basel (Dr. Claudia Vonlanthen-Petrimpol, Prof. Thierry Girard); Kantonsspital Bruderholz (Dr. Anja Baltussen); Klinik Engeried, Bern (Dr. Peter Müller, Barbara Huber); Lindenhofspital Bern (Dr. Daniel Sasdi); Privatklinik Linde AG Biel (Dr. Christina Amport, Brigitte Graf); Regionalspital Emmental, Burgdorf (Dr. Caroline Oswald, PD Dr. Luzius Hiltebrand); Salem-Spital, Bern (PD Dr. Markus Ammann, Dr. David Ehm, Dr. Andrea Anna Melber, Dr. Alexsandra Immer-Bansi, Regula Ingold); Spital Frutigen (Dr. Norbert Müller-Strobelt, Heidi Jordi), Spital Münsingen, Inselgruppe AG (Dr. Andrea Anna Melber, Dr. Marc Dubler, Dr. Rocher Rauch); Hôpitaux Universitaires de Genève (HUG) (Dr. Benno Rehberg-Klug, Prof. Georges Savoldelli); Ospedale San Sisto, Poschiavo (Dr. Irene Sandmeier, Silvana Semadeni); Spital Oberengadin, Samedan (Dr. Christoph Winkler, Dr. Ladina Ganeo, Roswitha Folie); Klinik Stephanshorn, St Gallen (Dr. Jörg Frei, Dr. Andreas Stahel); Spital Wil (Dr. Anne-Dore Sturm, Dr. Cecile Leimgruber-Schenk); Kantonsspital Frauenfeld (Dr. Katja Bischof, Dr. Gundula Hebisch); Kantonsspital Münsterlingen (Dr. Pascal Welpe, PD Dr. Thomas Neff); Kantonspital Winterthur (Dr. Doris Hofstetter, Dr. Jeaninne Brandenberg, Dr. Nina Meier); Klinik Im Park, Zürich (Dr. Pascale Stapfer, Dr. Martin Fröhner, Nathalie Colling); Privatklinik Bethanien, Zürich (Dr. Karin Gott, Dr. Julia Peyer); Privatklinik Lindberg, Winterthur (Dr. Doris Hofstetter, Dr. Julia Peyer); Spital Limmattal, Schlieren (Dr. Judith Wyss, Dr. Thomas Hegi); See-Spital, Horgen (Dr. Cornelia Baumann; Dr. Mirko Brenni); Stadtspital Triemli, Zürich (PD Dr. Stephan Blumenthal, Dr. Gabriella Stocker); GZO Spital Wetzikon (Dr. Barbara Blöchlinger-Wegmann, Dr. Peter Baur); Spital Lachen (Dr. Swantje Weber, Kathrin Meier); Centre Hospitalier Universitaire Vaudois (CHUV), Lausanne (Dr. Moira Bäriswyl, Prof. Christian Kern); Spital Davos AG (Dr. Dietrich Hübner); Universitätsklinik Würzburg (Prof. Peter Kranke); DRK Kliniken Berlin, Westend, Berlin (Nadia Schapiro, Prof. Arnd Timmermann);

10 Years RemiPCA SAFE Network

We know what we are doing!

The remifentanil PCA is the only procedure in obstetrics that, with the help of the network, gives transparent insight on the effects and side effects of the method within the own hospital and over all participating hospitals. We are thus always able to review and improve our actions.

10 Years RemiPCA

All should know what they are doing!

Every procedure that we use must be performed safely and its effects and side effects should be continually reviewed. Without this control, our actions are based only on emotion, anecdotes and opinions rather than facts.

It should be our goal to have such data collection available for all other procedures as well. This would give us an overall picture of the impact of our analgesics on the course of delivery, mother and child.

10 Years RemiPCA

Common responsibility!

Only by systematically pooling our clinical experience can we learn from each other. With this we achieve real progress in our daily activities. That's the real benefit for mother and child.

Research is very important, but ultimately what counts is what enters the clinical routine and what is carried out safely.

To Do

Pain therapy in labour needs to be organised consciously, transparently, and interdisciplinarily.

Do No Harm
